

A HISTORICAL REPORT ON THE CONGRESSES OF ISHM

Theodore J. Drizis MD, PhDME, PhDHI
Kalamata – Greece

AIM

The aim of this work is to present a historical reports on the Congresses of ISHM, on occasion of its centenary from its foundation.

MATERIAL

The material of this work is the Artthur Castiglioni's (1874 – 1953 CE) textbook "A History of Medicine" of the first half of 20th c. CE in Greek translation.

METHOD

The method is the textual criticism in order to validate the research as can be determined from the relative, accessible to us, bibliography.

RESULTS

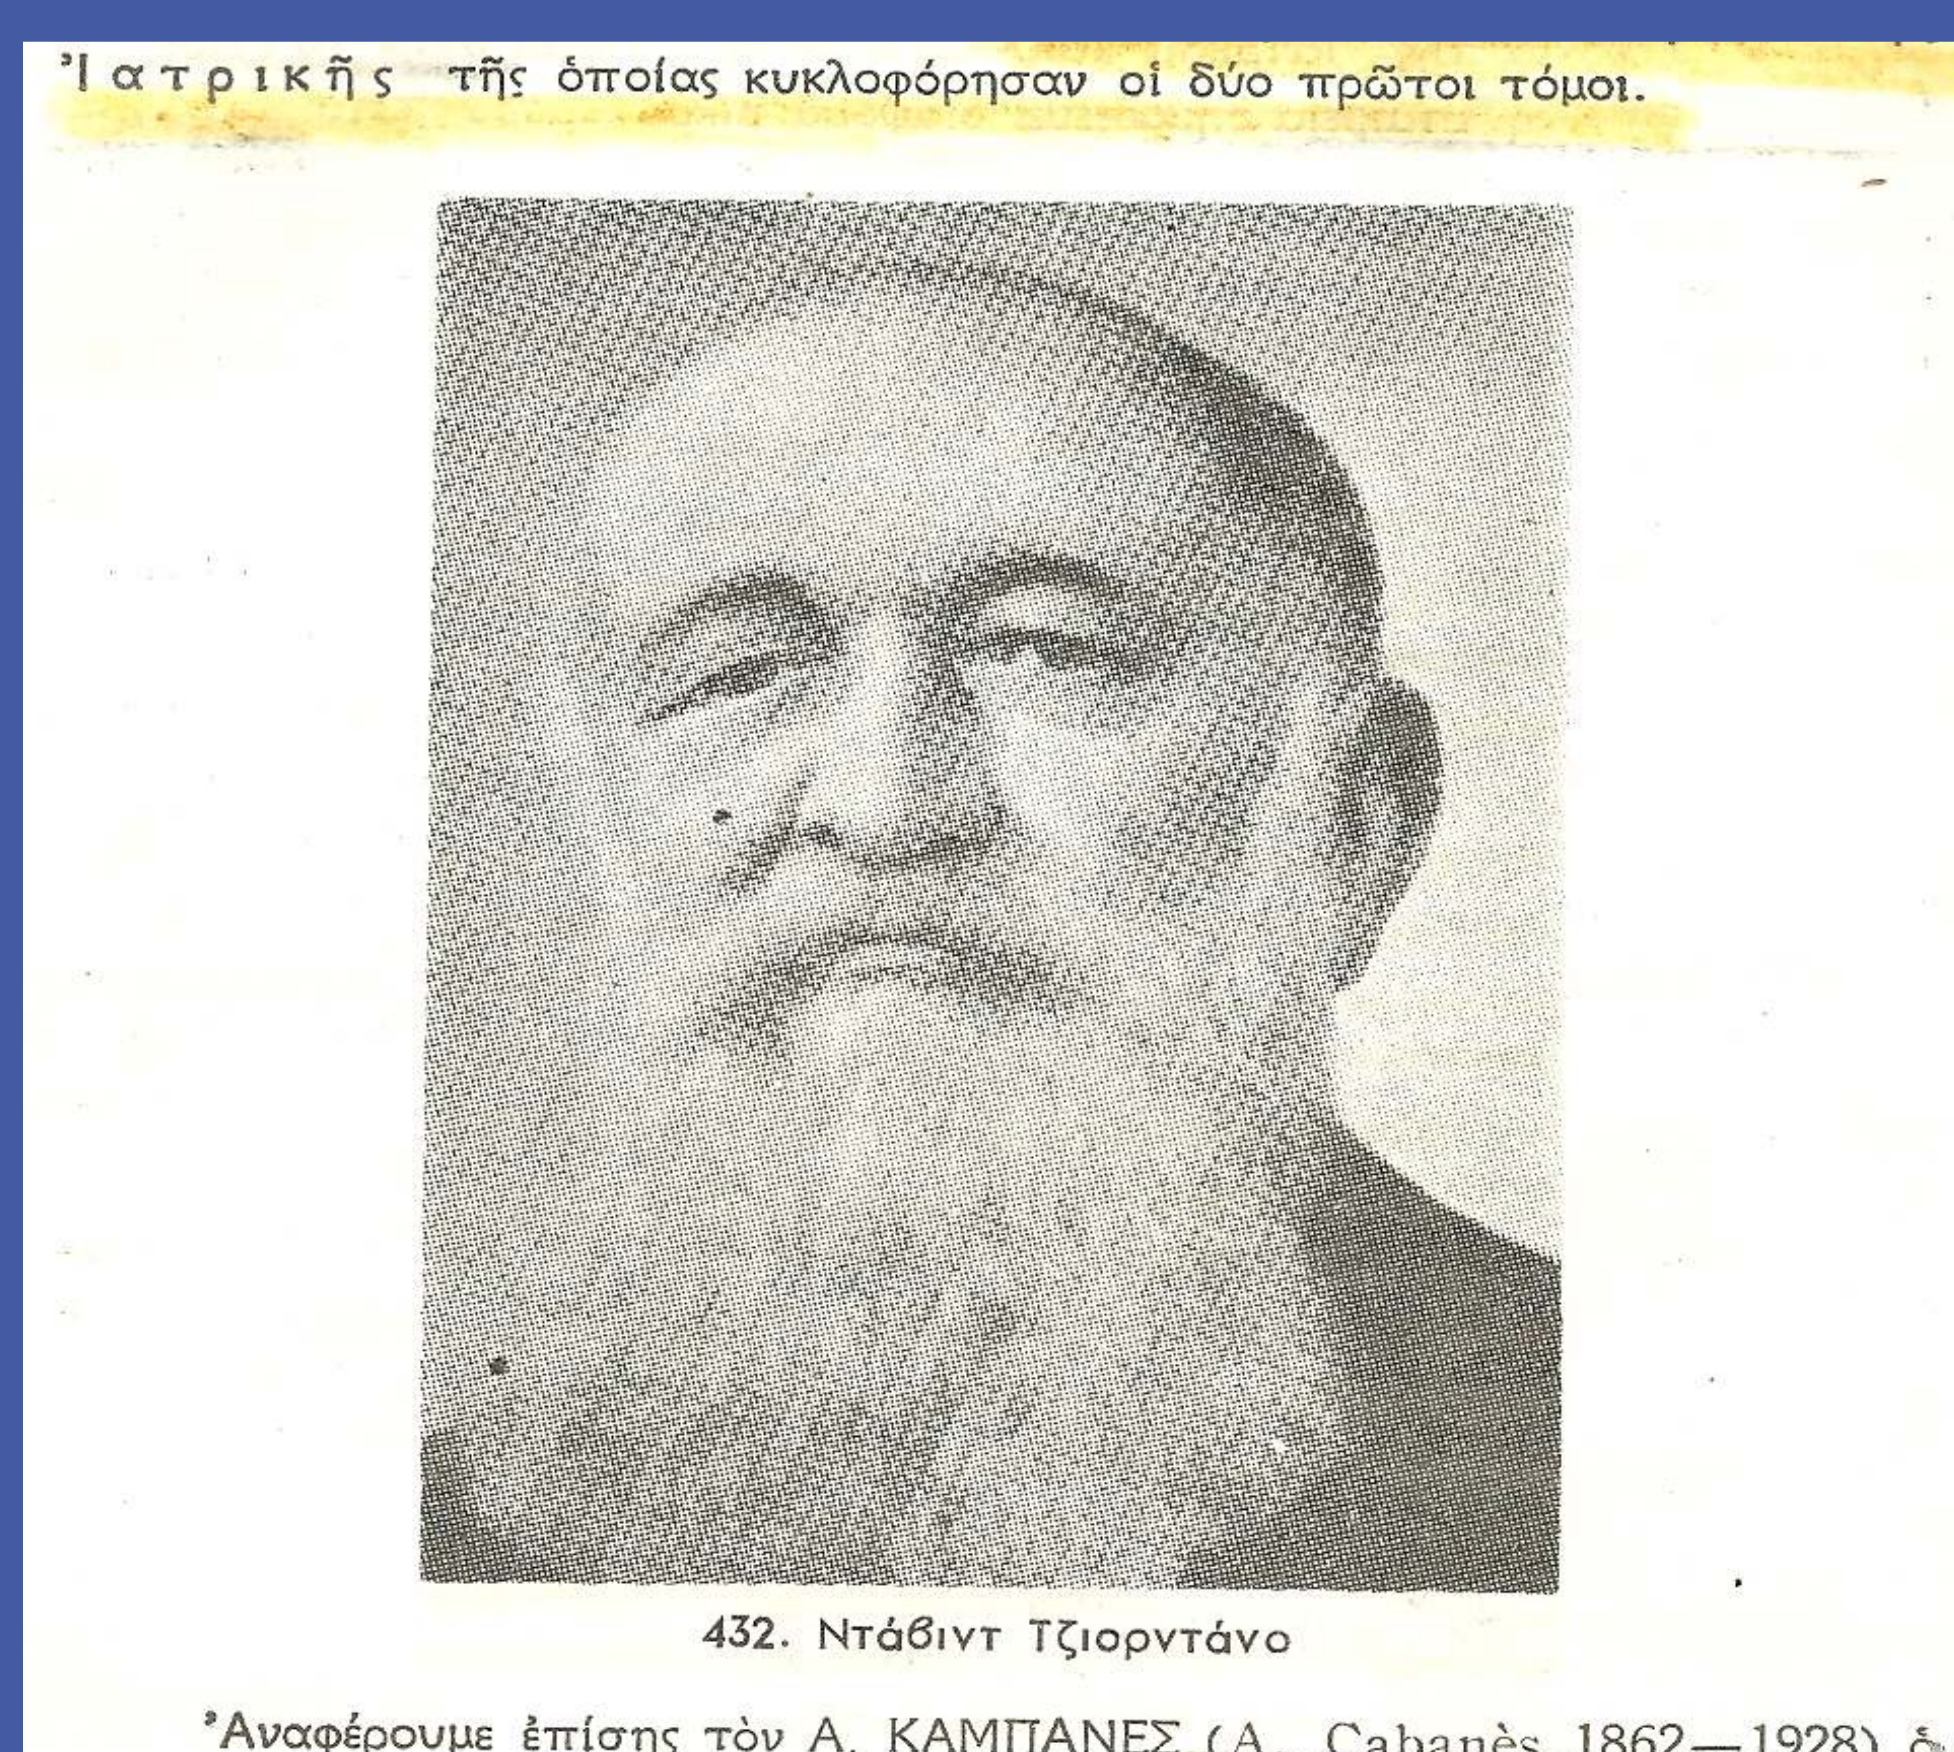

In the results, Art. Castiglioni says: "The International Society of History of Medicine, with a permanent seat in Paris, tries to coordinate the work of various countries and it has convoked, until now, eleven international congresses (Antwerp, Paris, Brussels, Geneva, Leiden – Amsterdam, Oslo, Rome, Bucharest, Madrid, and Yugoslavia). The IIW–W interrupted its activity and it is difficult to predict whether and when to be started again".

Besides, in other paragraph, he says: "... In Yugoslavia was distinguished professor L. Thaller from Zagreb, who was President of 11th Congress of International Union... J. Tricot – Royer, of Antwerp, founder and Emeritus President of International Union..."

What is more, in other part at the same paragraph Art. Castiglioni mentions: "... "Aesculapious" official organ of the International Union, of which the edition interrupted during the W – W both..."

Furthermore, Art. Castiglioni mentions the Italian surgeon D. Giordano as President of International Union with excellent works in History of Italian Surgery.

CONCLUSION

In conclusion, taking everything of the above in consideration, I am convinced that the Art. Castiglioni's reports are obvious, and as these reports are derived from an eye - earwitness, they establish historical witnesses.
